General

Manubloc geared motors with parallel gears are used to adapt the speed of the electric motor to that of the driven machine.

Their size is therefore determined by the motor power (P) expressed in kilowatts (kW) and the output rotation speed of the gearbox (n_S) in revolutions per minute (min^{-1}).

The main characteristic of the speed reducers is the rated output torque (M_{nS}) expressed in Newton-metres (N.m) :

$$M_{nS} = \frac{P \times 9550 \times \text{efficiency}}{n_S}$$

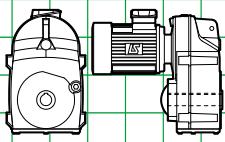

A range of eight sizes: 31, 32, 33, 34, 35, 36, 37, 38.
Rated output torque: 10 N.m to 14 500 Nm.
Power rating: from 0.25 to 110 kW.
Reduction ratios: from 2,88 to 4600.
High efficiency: 95 % to 98 %.
Reversible.
Quiet operation.

Name	Material	Observation
Housing	Cast iron	<ul style="list-style-type: none"> - use of single-component pearlitic ENGJL-200 cast iron (flake graphite: 200 MPa tensile strength) to ensure unit is fully sealed - monobloc with reinforced internal ribbing to absorb vibrations and noise and to increase rigidity - flexible mounting R, housing with tapped side NU or with flange BT, BS or BD. They are compact and meet industrial requirements

Selection methods

SELECTING AN INPUT SHAFT GEARBOX (AP)

The following must be known:

- the duty factor,
- the input and output speeds,
- input power or output torque,
- fixing form and operating position.

1 - Choosing the K duty factor

The application and operating conditions determine its value. Refer to page 40 of the electromechanical manual reference 5181.

2- Selecting the gearbox

a- Calculate the reduction i such as

$$i = N_E / N_S$$

where N_E and N_S and the input and output speeds (in min^{-1});

b- Calculate:

- the equivalent torque M_{eq} :

$$M_{eq} = M_S \times K$$

where M_S is the output moment (in N.m), K the duty factor,

- or the equivalent power P_{eq}

$$P_{eq} = P \times K$$

where P is the input power (in kW);

c- Refer to the selection tables corresponding to the type of gearbox pages 14 and 15: gearbox only and pages 16 and 17: combined gearboxes.

Each box in the table specifies:

- gearbox size,
- exact reduction,
- input power for $K = 1$,
- rated output torque for $K = 1$

Select the gearbox, in the tables (pages 14 to 17), which has a torque equal or above the equivalent torque (or a power equal to above the equivalent power) calculated beforehand for the reduction required.

When the input speed is different from those proposed in the grids, select the gearbox size using the grid with the input speed closest to that used for the output speed close to that required. Then choose the reduction appropriate for this size of device.

3- Operating positions

Pendular fixing form R or NU: pages 8, 9

Flange form: pages 10, 11

4- Radial force check

Refer to the tables in page 43 to 45 of the reference document 5181.

If the radial force available on the output shaft (**H**) is below that required by the application, select again using a higher duty factor. The values used (pages 22 to 83) are given for client shaft inserted in hollow shaft H, at the most demanding input speed. Call Leroy-Somer for optimised values.

For the output shaft version **S** on Mub 36 to 38, our gearboxes can withstand higher loads. Call Leroy-Somer for optimised values.

For gearboxes driven by the motor by means of a belt pulley system, check in the tables in page 43 of the document reference 5181 the minimum diameter of the pulley to install on the gearbox input shaft. These values are those for client shaft inserted in the hollow shaft **H**.

5- Choosing the options

Refer to the Equipment and options chapter for the choice of any standardized options. The Mub 36 to 39 can be fitted with an anti-return device (backstop AD). In this case, specify the direction of rotation of the gearbox seen from the output shaft side (p.111).

6- Commissioning, lubrication (p.118)

In case of doubt in the choice or selection of a device, please do not hesitate to contact your Leroy-Somer agent or distributor.

Example of selection

Motorisation of a powder screw:

- power 2.2 kW at 1500 min^{-1} ,
- output speed 15 min^{-1} ,
- operation: 9 hours per day with damped jogging. Flange fastening, horizontal mounting with semi-elastic coupling on primary shaft and hollow shaft at output.

1- Duty factor $K = 1$

2- Selection:

a- reduction ratio:

$$i = 1500 / 15 = 100$$

b- equivalent power:

identical to the input power ($K = 1$).

The following is found in the selection grid in page 14 for the closes reduction index: 106 a Mub 3433 for the 2.2 kW power.

3- Operating position:

B5 (page 11).

4- Fixing form:

standard flange (page 10).

Selection

Manubloc: Mub / LS, LSES motors / 4 poles

SELECTING A GEARED MOTOR

Proceed as follows to select an MI or MU geared motor:

1 - Determine the power or torque necessary

The following must be known:

- P_{uE} : useful input power necessary for the application

- N_S : gearbox output speed in min^{-1} .

The following selection tables are organized:

- per power for output speeds of 0.31 above 517 min^{-1} ; please consult for lower speeds,
- per increasing by K_p , per reduction index section.

The relation between input power, output speed and output torque is given by the following formula:

$$M_S = P_E \times 9.550 \times \eta / N_S$$

where η represents the mechanical efficiency of the gearbox (pages 7 and 51 of document reference 5181).

2 - Determine the duty factor K required

It is determined by 3 criteria:

- a - Operating time (h/d)
- b - Starting frequency Z
- c - Ratio between the load inertia and the motor inertia: curve I, II, III (page 40 in document reference 5181).

3 - Determine the type of gearbox

- In the tables in pages 22 to 83, select the power required for the application.
- Choose the output speed matching the application.
- And then choose the geared motor with a duty factor above that required by the application.

4 - Checking

a- Radial force applied by the load on the output shaft (pages 44 and 45 of document reference 5181).

b- Check the geared motor chosen.

In the selection tables in pages 22 to 83, check that the value for permissible radial load by the gearbox exceeds the radial force applied by the load (page 44 of document reference 5181). The values used are given for client shaft inserted in hollow shaft H, at the most demanding input speed. For the output shaft version S on Mub 36 to 38, our gearboxes can withstand higher loads. Call Leroy-Somer for optimised values.

5 - Fixing form

Refer to page 8 for the definition of flexible or lateral mounted form and page 10 for the definition of standard flange fitting.

6 - Operating position

Refer to page 9 or 15 for the definition of the operating positions form R or NU fixing form, and pages 11 and 13 for those of the flange form BT, BS or BD.

7- Choosing the options

Refer to the "Equipment and options" chapter for the choice of any standardized options.

The Mub 36 to 38 can be fitted with an anti-return device (backstop AD). In this case, specify the direction of rotation of the gearbox seen from the output shaft side (p.111).

8 - Commissioning, lubrication

Check the «Electrical characteristics» defined in document reference 5181.

In case of doubt in the choice or selection of a device, please do not hesitate to contact your Leroy-Somer agent or distributor.

Example of selection

- Application data:

Roller conveyor drive:

$P_{uE} = 3 \text{ kW}$

$N_{uS} = 40 \text{ min}^{-1}$

Daily operating time: 21 hours per day with violent jogging

Fastening by tapped flange, horizontal mounting, hollow shaft; safety brake motor.

- Determination of the duty factor:

- The application class is II (read page 42 in reference document 5181).

- At the AGMA II class, the corresponding duty factor K_p is = 1.4 (read page 40 in reference document 5181).

Selecting the geared motor

a - Fixed speed

- Search the selection tables corresponding to $P_{uE} = 3 \text{ kW}$

- Search the output speed N_S of the geared motor closest to 40 min^{-1} (page 50)

- Select the geared motor with a duty factor above that required by the application.

- ---> Select the geared motor Mub 3432, $i = 33.9$ and $K_p = 2.48$ (extract in next page)

- To finish, check that the radial and axial forces values of the geared motor exceed the stress applied by the load.

b - Variable speed

When using variable speed with separate drive, the input speed of the gearbox must not exceed 3000 min^{-1} .

In the tables at 87 Hz, select the power equivalent to 3 kW - 50 Hz , 40 min^{-1} (page 44).

Take the 1.8 kW motor developing 3.13 kW at 87 Hz.

Search for the speed required 43.8 in Mub 3332 with $i: 49.1$ and $K_p = 1.4$ (extract in next page).

Selection

Manubloc: Mub / LS, LSES motors

SELECTING A FIXED SPEED GEARED MOTOR

- Search the selection tables corresponding to $P_{uE} = 3 \text{ kW}$ (page 50).
- Search the output speed N_S of the geared motor closest to 40 min^{-1} at 50 Hz.
- Select the geared motor with a duty factor above that required by the application.
- ---> Select the geared motor Mub 3432, $i = 33.9$, $K_p = 2.48$
- To finish, check that the radial and axial forces values ($F_R E/2$) of the geared motor exceed the stress applied by the load.

AVAILABILITY

Although quality and energy performance of the products have now become the major criteria in user choices, they remain insufficient if the product's availability does not meet the needs.

An abstract of the table below provides a view of the ranges part of the Express Availability.

To know the lead time of your product, refer to the detailed grids accessible on: <http://lrsco.co/dispofr>

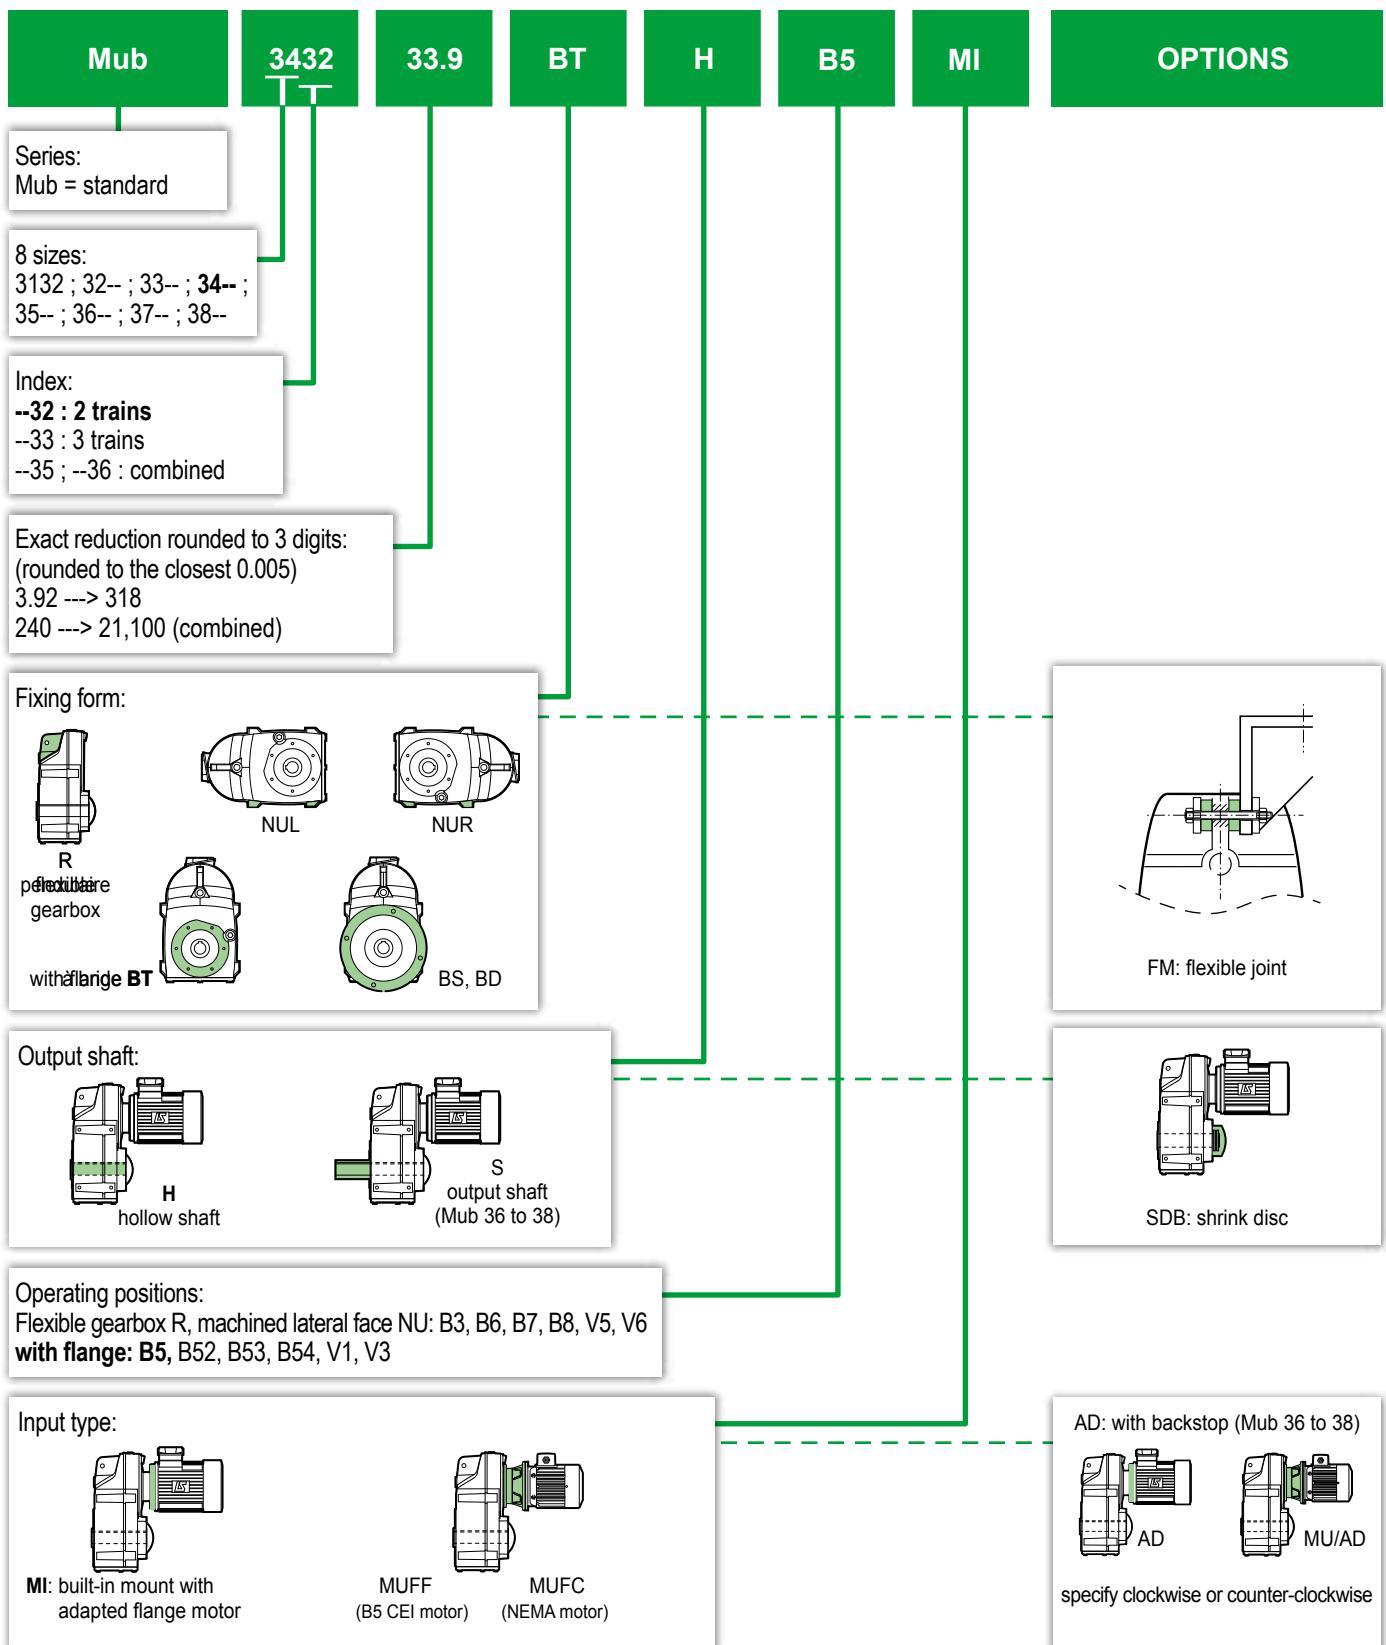

General applications	Motors and geared motors	Range	*Shipping times (with a selection of options)
	IMfinity IE2 - IP55 induction motors	0.75 to 355 kW	D to D+10
	IMfinity IE3 - IP55 induction motors	0.75 to 355 kW	D to D+10
	Dyneo® permanent magnet synchronous motors, including IEC motors	8.2 to 45 kW 40 to 320 kW	D+5 D+10
	LS non-IE single speed induction motors	0.09 to 3 kW	D to D+2
	Single phase motors	0.06 to 1.5 kW	J
	Brake motors	0.25 to 45 kW	D+1 to D+10
	Helical geared motors	30 to 14,500 Nm	D+5 to D+10
	Motors with built-in drive VMA	0.25 to 7.5 kW	D+2 to D+5

*Shipping times in working days for orders received at the plant on day D before 12:00.

Refer to details page 122.

Equipment and options

Shrink disc SDB

ADVANTAGE OF THE SHRINK DISC

Specially designed for assembling hollow shafts, it attaches the transmission device securely to the shaft.

The torque (**M**), radial (**F_R**) and axial forces (**F_A**) are transmitted fully without play.

There is no need to use a key, and the absence of the keyway avoids incipient cracks.

Alternating movements are possible within the limits of the torque (**M**) indicated in the technical catalogue selection tables.

The absence of initial play is retained throughout the lifetime.

The tightening torque is maintained for operating temperatures from -50°C to + 250°C.

Roughness tolerance

The maximum permissible surface roughness is: **R_z max = 15 µm**.

The maximum permissible tolerance on the shrink disc working reach diameter = **h8**.

Secure positioning

While the screws are tightened, the hub does not move axially in relation to the shaft.

Characteristics of the shrink disc

The very high transmissible torque (**M** of the shrink disc) is given below. Consider the torque transmissible by the gearbox.

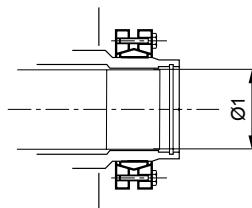

No axial movement between shaft/hub (shrink disc **F_A**).

Takes little time to assemble.

Quick to dismantle.

The assembly and disassembly instructions are described in the appropriate manual.

Type	Shrink disc torque M N.m	Fastening torque of shrink disc screws N.m	Dimensions see pages

Mub 32	1106	12	86
Mub 3132	570	12	84

DETERMINATION

For gearboxes with hollow shaft, the form must be defined specifically:

- **NU SDB**: housing with tapped holes on side.

L: on left, R: on right.

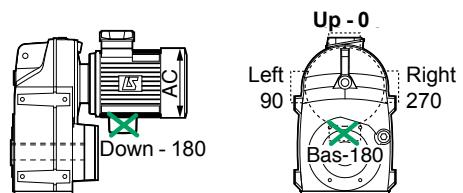

- **BT SDB**: face-mounted housing.

- **R SDB**: flexible mounting form.

Restriction: in the majority of cases, motors cannot be supplied with the terminal box in position Down-180.

FM FLEXIBLE JOINT

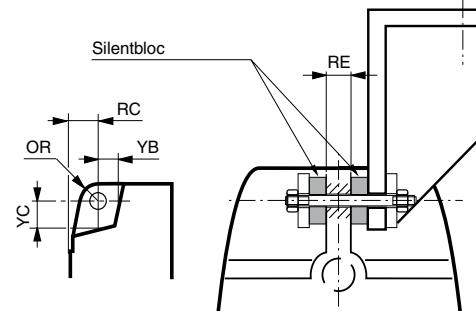

Dimensions in millimetres

The reaction torque of the Manublocs must be absorbed by a suitable torque arm (not supplied).

End play that is too great risks to produce dangerous jolts when the running direction is reversed or the speed switched; the use of flexible joints is recommended: compressed rubber damping components (of the Silentbloc type) as shown in the diagram opposite.

The flat surface of the housing has a transverse hole in it that can be used for mounting such joints as shown in the sketch. The other components are not supplied by Nidec.

HEAT EXCHANGER

Dimensions in millimetres

The geared motor may require an external cooling system to maintain its performance. We recommend the heat exchanger appended, approved by our technical services. It is composed of: a metallic housing (1), motor (2), pump (3), fan (4) with the following characteristics:

- Motor: 1.1 kW, 4p, IP 55
- Maximum dissipation: 10 kW
- Flow rate: 40l/min for 40 cSt - 4 bar
- Max oil temperature: 90°C

The cooling air flow must be free of obstacles. For the ideal air intake and discharge distance, refer to dimensions W1 and W2 (mm) in the table opposite.

NAMEPLATES

Check equipment conformity: construction shape, indications on nameplates.

Information ① to ⑪ to be reminded whenever ordering spare parts.

Other logos may be included optionally: approval is required prior to ordering.

Example: LS 80 L IFT/NIE

MOTOR NAMEPLATE

Definition of symbols

T: Impregnation class

IE2: Efficiency class

IP-- IK--: Ingress protection*

C.I.F: Insulation class

(Ta) 40°C: contractual ambient operating temperature

$\cos \phi$ or ϕ : power factor

A : Rated intensity

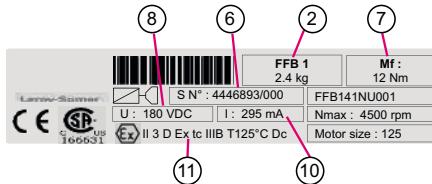

Δ : Delta connection

λ : Star connection

A : Vibration level

H : Balancing mode

BRAKE NAMEPLATE

Essential information included on the nameplates:

①	Serial motor, frame size
②	Brake type FFB
③	Speed of rotation (min^{-1})
④	Rated output power (kW)
⑤	Motor voltage (V)
⑥	Motor and brake manufacturing no.
⑦	Mf: Braking torque (N.m)
⑧	U: Brake coil voltage (VDC)
⑨	Duty - Duty (operating) factor
⑩	I: Coil current (mA)
⑪	Special marking (ATEX)

Information to be reminded whenever ordering spare parts

Bearings

DE: Drive end bearing

NDE: Non drive end bearing

Marking

Definition of nameplates symbols

CE: Legal sign that the equipment conforms to the requirements of European Directives.

CSA: CSA certified product, compliant with UL

*IK: Resistance to impacts

The motor withstands low mechanical impacts (IK 08 as per EN 50102). **The user shall provide additional protection in case of risk of high mechanical impact.**

Identification

FCPL Brake motors

NAMEPLATES

Nameplates identify the equipment, indicate the main performance and show its compatibility with the main standards and regulations related to them.

DEFINITION OF NAMEPLATE SYMBOLS

 Legal sign that the equipment conforms to the requirements of European Directives

 Eurasian conformity

Mains supply plate:
induction motor, short-circuit rotor

LS : series

180 : frame size

LR : housing description

Motor no.

2016 : year of production

M3722D16 : motor batch number

001 : Serial number

IP55 : motor protection indices

22 kW : rated output power

3~ 4P : three-phase A.C. motor

Hz : supply frequency

cos φ : power factor

cl.F : insulation class F

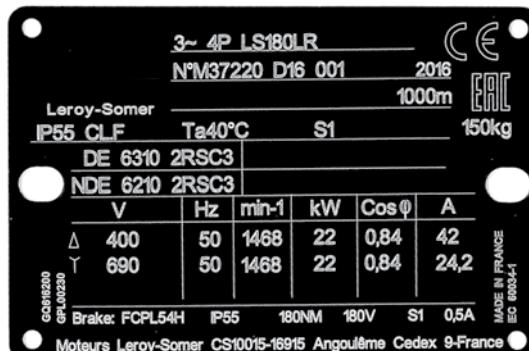

Ta : 40°, contractual ambient temperature

min⁻¹ : number of revolutions per minute

S1 : duty

V : supply voltage

A : rated current

Brake 

FCPL 54H : type of brake

IP55 : brake protection index

180 Nm : braking torque

180 V : brake supply voltage

0,5 A : brake coil current

Information to be reminded whenever ordering spare parts

Installation

ACCEPTANCE TESTING

Check the condition of the equipment. In case of damage, either to the equipment or its packaging, record reservations with the carrier (if applicable, repairing may be excluded from the warranty).

Check that the equipment conforms to the order (construction shape, indications on nameplates)

See the leaflet reference 2557.

HANDLING

- It is mandatory to use lifting devices, fitted on equipment.

Allow sufficient room around the geared motor for plugs (or expansion tank) accessibility:

200 mm: G1/4" plug std Mub 31 to 35

500 mm: G3/4" plug with dipstick for Mub 36 to 38.

LUBRICATION

For operation in ambient temperature between -10°C and +40°C, Manubloc series 3000 is supplied, as standard, with mineral Extreme Pressure oil type EP ISO VG 220. Each gearbox is filled according to the operating position specified in the order. Refer to the gearbox nameplate (page 112) and installation manual reference 4031 for the quantity required for the operating position of your unit.

In the case of a selection where the output shaft does not make a complete turn, please consult us to define the most appropriate oil quantity or operating position.

A maintenance fault may cause material or bodily damage. Check regularly that the recommendations concerning mechanical and electrical installation are still complied with.

STORAGE

Store the equipment in a clean and dry location, protected from shocks, vibrations, temperature differences (between -30°C and +50°C) and in an atmosphere with a hygrometry below 80%.

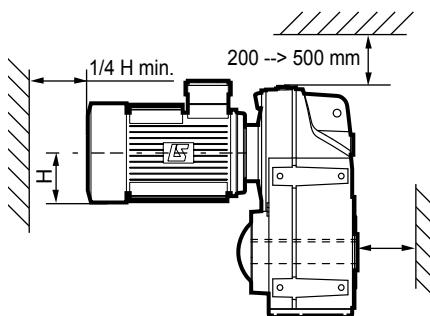

Long-term storage (>1 year)

- Unless the equipment is lubricated for life, fill the gearbox completely with oil (upon commissioning, drain and top up as described in the manual of the gearbox concerned). Coat the external gasket(s) with grease.
- Enclose the unit in a sealed plastic bag (e.g. thermal glue) with a desiccant product inside.
- For manual release brake geared motors, release the brake to prevent sticking.

COMMISSIONING

The installation must be performed by skilled personnel.

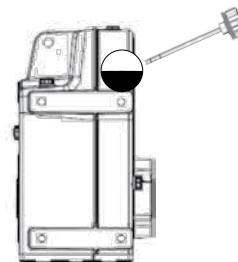

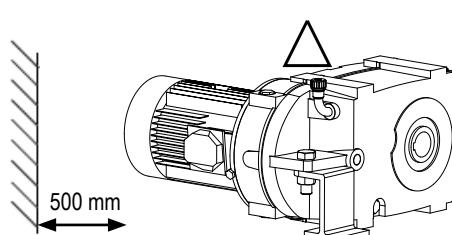

- Mount the gearboxes onto rigid and flat supports free of vibration. Use screws of appropriate length and quality class (class 8.8 min) and tighten them at 70 % their elastic limit.
- Remove the protections from the shaft(s) and flange(s): plastic end pieces, oil or varnish (use a solvent if required, while avoiding contact with the gaskets).
- For gearboxes lubricated with oil, check the oil level or top up.
- Fit the breather plug at the upper point of the gearbox when the equipment has one.
- Lubrication: see appropriate manuals. (p2)

Lubrication kit

Certain operating positions or a high input speed require a lubrication kit to preserve the initial performance of Mub 36 to 38 gearboxes (manual reference 5088).

In this case, allow sufficient room around the geared motor for plugs (or expansion tank) accessibility, machine stopped. (Installation manual reference 5088).

Example: Mub 36 in operating position B7 (gearbox R, NUL) or B54 (flange mounted gearbox).

Service for drive systems

DEADLINE COMMITMENT

Express Availability

- Ready to ship in 1 to 10 working days
- Motors, servomotors, geared motors, drives, options and accessories
- Limited quantity
- Access to the list of products eligible to *Express Availability*, and the appropriate conditions, directly on our Web site

Audit & Advice

- Facility audit
- Energy optimisation
- Modernisation
- Facility management

Installation & commissioning

- Installation
- Commissioning
- Extended warranty
- Training

Maintenance

- Emergency services
- Services upon request
- Contracts

MAINTENANCE

The service life of your facilities ensures continuity of your production flow and extends the lifetime of the equipment, ensuring a good return on investment.

For emergency situations, we have defined the appropriate services to offer you the solution ensuring your installations will restart promptly.

Experts close to your facilities available 24/7 monitoring proper operation of your equipment, able to define the level of intervention required according to the context, and able to intervene urgently: that is our vision of maintenance.

Unique services and support

- Proximity network with 200 service partners
- Express transport option in 24h

MONITORING CONTRACTS

Maintaining drive systems in operational condition at all times is vital for proper operation of your equipment, whether these are line production units or utilities.

Parameter monitoring programmes ensure drifts and anomalies likely to cause malfunctions are detected early.

MAINTENANCE CONTRACTS

Observing inspection intervals and changing first wear devices and parts are often complex and tedious operations because of the multiplicity of equipment present in an industrial site.

To facilitate these operations, our solutions allow managing the maintenance of drives.

Express Availability

Being able both to respond to urgent requests and adhere to promised customer lead times calls for a powerful logistics system.

The availability of geared motors is ensured by the network of approved partners and Leroy-Somer central services all working together.

The colour code in the "Express Availability" selection grids ensures product lead times are indicated per delivery time for each family, and according to the quantities ordered.

Consult Leroy-Somer.

The illustration of the delivery time below for the equipment selected page 22, i.e. D+5; D being the day the order is received by the factory before 12:00 am.

FFB - IFT/NIE geared brake motors (Not in any efficiency class) Helical gears COMPABLOC, MANUBLOC, ORTHOBLOC Standard environment - Fixed speed

AVAILABILITY TIMES EX WORKS (FRANCE), IN WORKING DAYS

Orders received, within the maximum quantity limit, by the factory on day D before 12:00 pm Central European Time, will have the following Availability.

For products with options, availability will be that of the longest lead-time item i.e; the product or its options.

If the order is received after 12:00 pm 1 working day on the mentioned availability will be added.

The maximum quantity is per line of order. Above this maximum quantity, please consult your Sales Office.
